Volunteers Needed for Brain Imaging Research Study

If you have no history of depression or bipolar disorder, no recent antidepressant/mood stabilizer use, and are between the ages of 20–64, you may be eligible!

• This study is looking at how brain structural and functional pathways influence mood and cognition.

• This study involves 2 visits to our laboratory. Both visits must occur within 2 weeks, and visits last approximately 4 hours each.

• This study involves a blood draw and a brain scan.

• Eligible participants must pass a drug test and not be pregnant.

• Participants can earn up to $300 for completing all appointments

Please call (310) 825-4875 or e-mail DGCBrainImagingStudy@mednet.ucla.edu and ask to speak to the Depression Connectome Study Coordinator.
